LABORATORY REPORT

DATE : 11.04.2023
PATIENT'S NAME: ANN NYAWIRA
AGE : 17 YEARS
GENDER : FEMALE
LAB. NO. : S/956/23
REQUEST : HISTOLOGY
DOCTOR : NYANGARESI

RIGHT PAROTID TUMOUR.

Clinical History.

17 year old female with a right parotid swelling. Excisional biopsy performed.

Gross

Two (2) specimen received in one container.

- I. Stitched – Irregular soft tissue specimen that is brownish measuring 40x20x20mm. Cut surfaces are brownish and representative sections processed.
- II. Non-stitched – Small pieces of greyish soft tissue specimens largest 25x20x20mm. Cut surfaces are brownish and representative sections processed.

Histopathology

The sections show parotid tissues in which is a benign vasoformative neoplasm comprising of ectatic vascular channels congested with blood. Some of the vascular channels are thrombosed. There is old hemorrhage into adjacent stroma.

Diagnosis

Right parotid tumour – Cavernous hemangioma.
