

How to run files system

A. when the system is lost due to power the ip of the computer most likely changes.

So to find out, search for cmd and type ipconfig so that you can see the current ip.

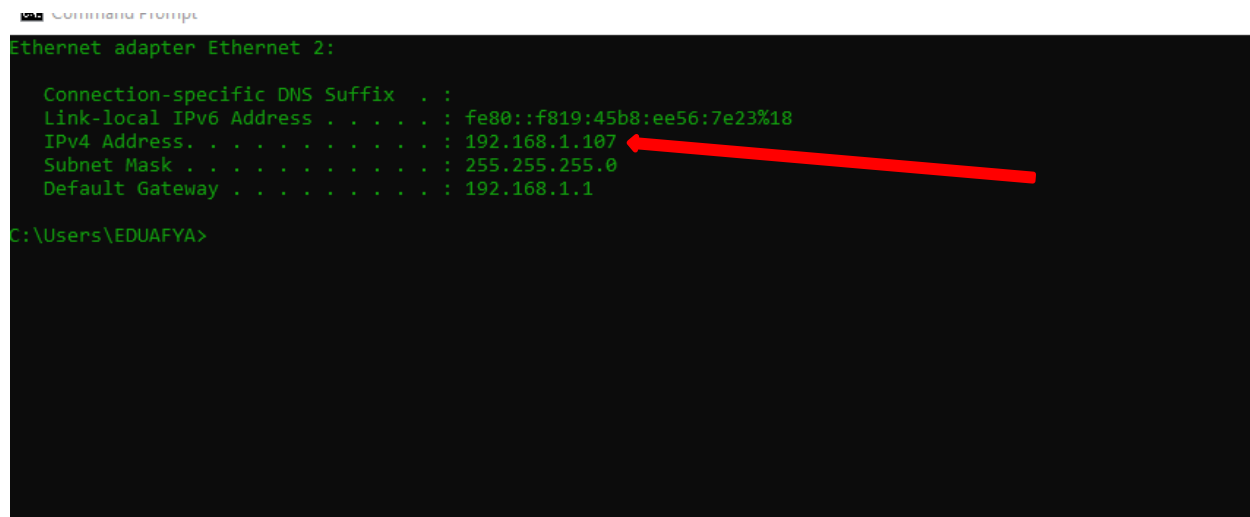

type ipconfig then hit enter

```
Command Prompt
Microsoft Windows [Version 10.0.19044.2130]
(c) Microsoft Corporation. All rights reserved.
C:\Users\EDUAFYA>ipconfig
```

A screenshot of a Windows Command Prompt window. The title bar says "Command Prompt". The text inside shows the Windows version (10.0.19044.2130) and copyright information. The user is at the C:\Users\EDUAFYA prompt and has typed the command "ipconfig". A red arrow points to the end of the command.

the ip in this case is 107 it might be different in your case.

```
Command Prompt
Ethernet adapter Ethernet 2:

    Connection-specific DNS Suffix  . : 
    Link-local IPv6 Address . . . . . : fe80::f819:45b8:ee56:7e23%18
    IPv4 Address. . . . . : 192.168.1.107
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 192.168.1.1

C:\Users\EDUAFYA>
```

A screenshot of a Windows Command Prompt window showing the output of the "ipconfig" command for the "Ethernet adapter Ethernet 2". The output lists various network settings, including the IPv4 Address, which is 192.168.1.107. A red arrow points to the "107" in the IPv4 Address.

Now go to the desktop and right click on the bat file

Click edit and change the former ip to your current in this case 107

You will put the ip you got after typing ipconfig

Once you've edited click file on the top right of the bat and save.

Now you can cancel the bat file and double click it to run the file system.

A cmd that looks like this will pop up.

```
C:\Windows\system32\cmd.exe
Active code page: 65001

C:\Users\USER\Desktop>cd C:\hospital/system

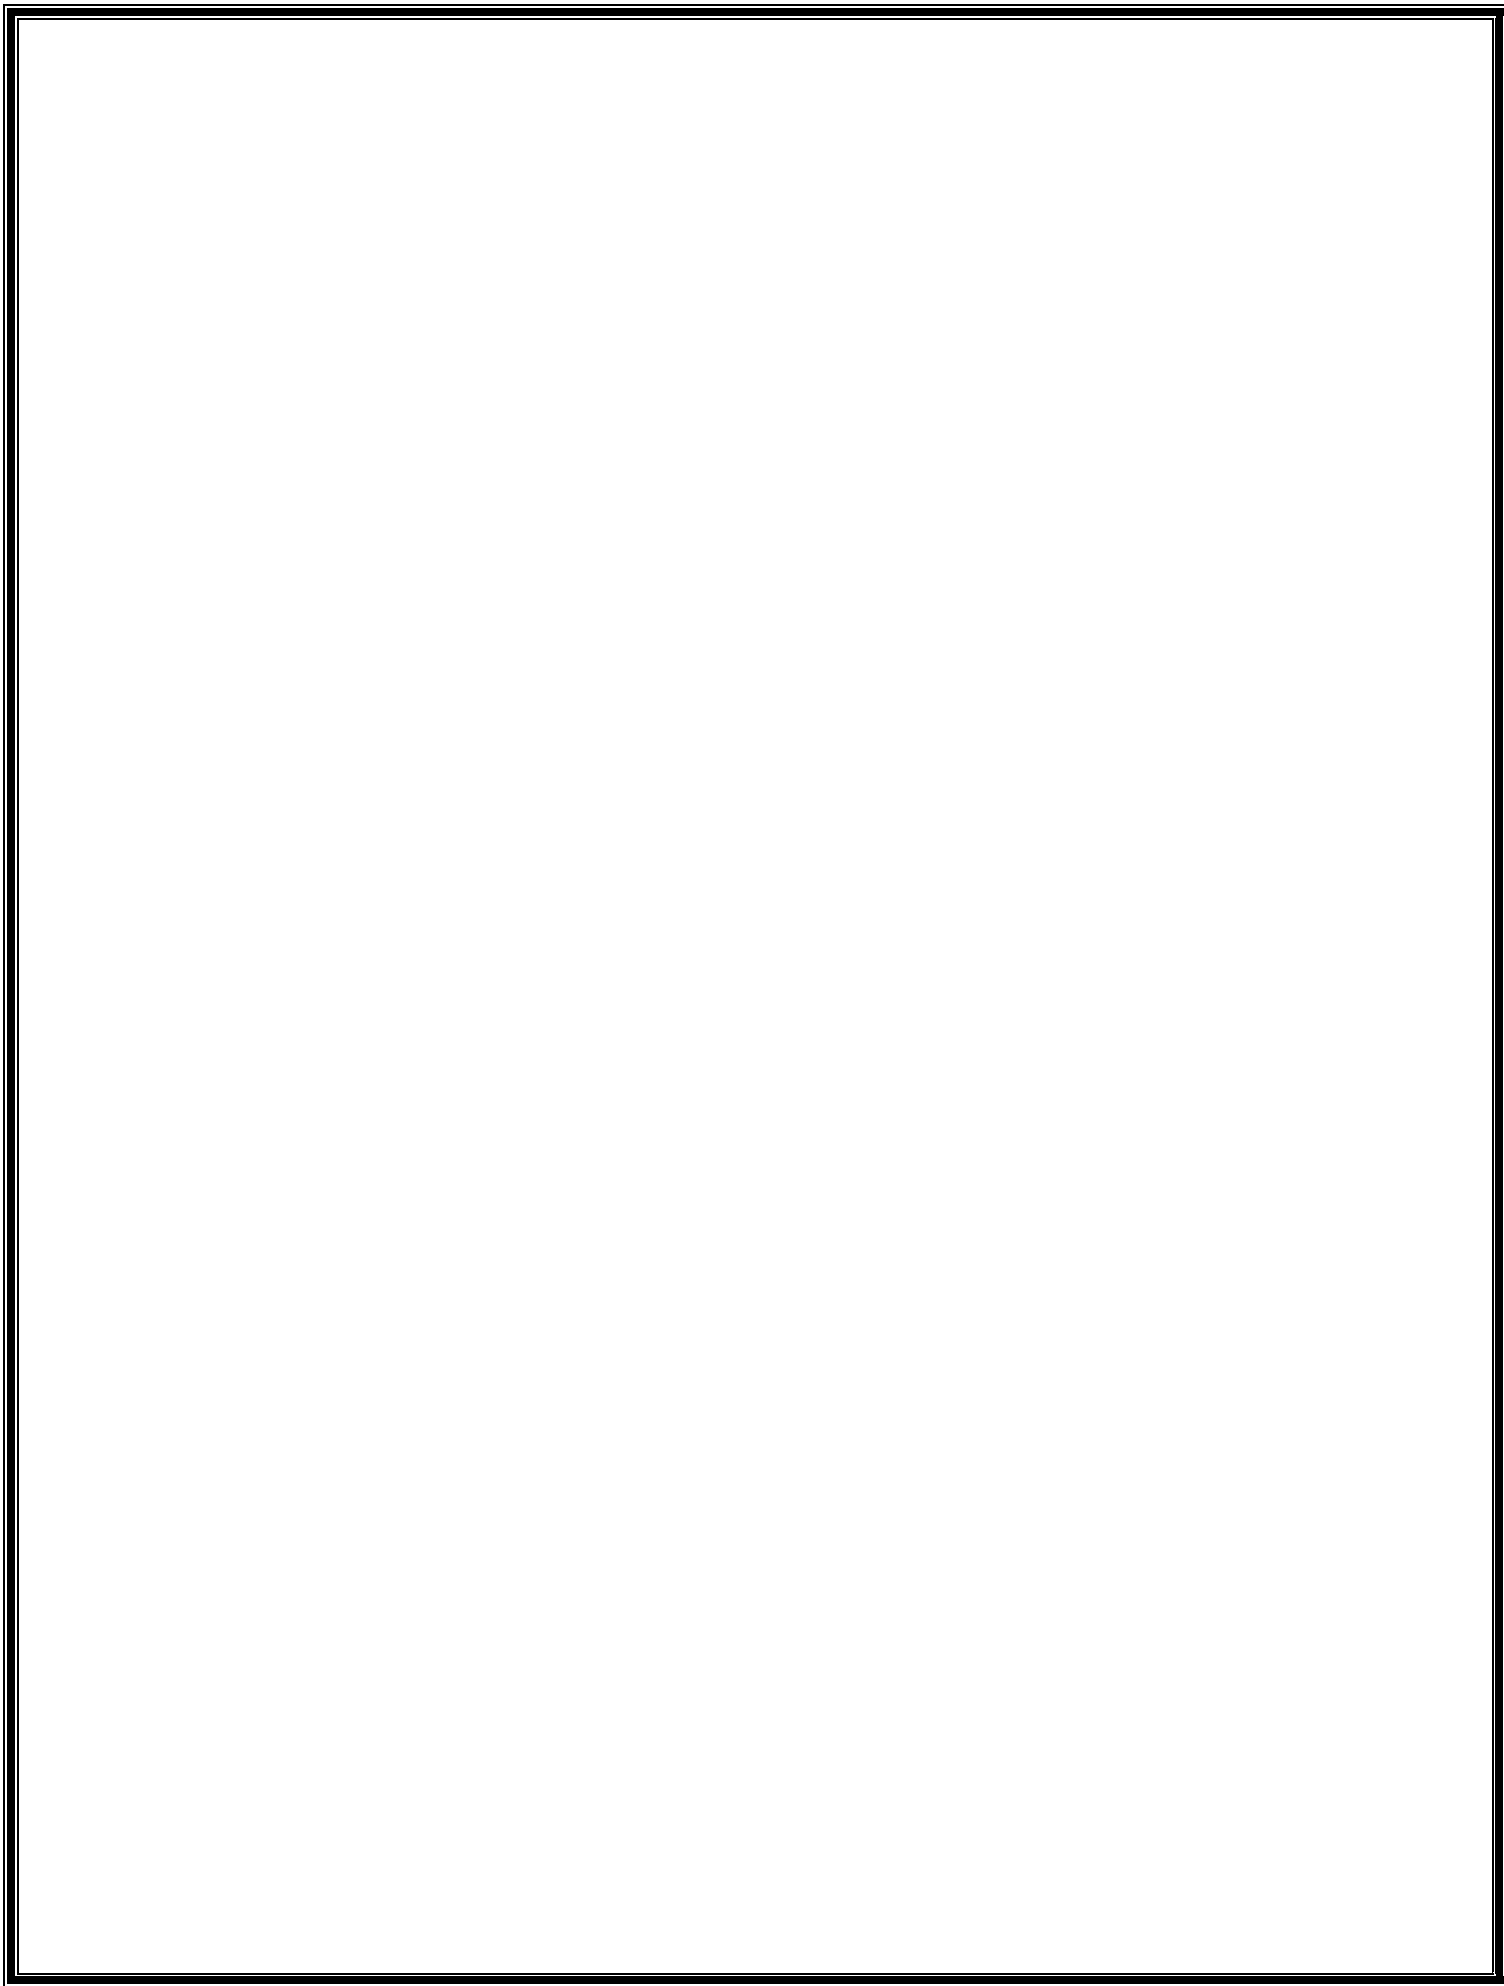

C:\hospital\system>C:\hospital\system\
'C:\hospital\system\' is not recognized as an internal or external command,
operable program or batch file.

C:\hospital\system>python manage.py runserver 192.168.1.63:8000

October 31, 2022 - 08:28:06
Django version 3.2, using settings 'system.settings'
Starting ASGI/Channels version 2.4.0 development server at http://192.168.1.63:8000/
Quit the server with CTRL-BREAK.
```

Make sure to its only one and confirm there is no listening failure written at the bottom.

You can now open the browser and open with this URL

```
C:\Windows\system32\cmd.exe
Active code page: 65001
C:\Users\USER\Desktop>cd C:\hospital/system
C:\hospital\system>C:\hospital\system\
